WellEz Information Management launches new Website

Houston, Texas – 27 July 2009 – WellEz Information Management, LLC, an operations reporting solution Company, announced today the launch of their new website, www.WellEz.com. The new site features in-depth information on the WellEz field reporting service for the oil and gas industry. It provides details on the WellEz reporting application, called WellEz.NET, and how the web based solution is used for reporting across the lifecycle of the well, from drilling to plugging and abandonment (P&A).

“We are excited to offer our clients and the energy community more information on our field reporting solutions, which are based on the Software-as-a-Service (SaaS) model”, says Charles Jeffery, President and CEO. “More companies are now adopting WellEz.NET as their field reporting platform owing to its cost effectiveness as an operations reporting solution. Clients pay for only what they use during the time that they need the service, without having to install and maintain expensive field reporting software. Our clients have found that timely, effective reporting from the field reduces costs while increasing staff productivity and the quality of decisions. This is particularly true during drilling, completions and workover when significant capital is being expended over a relatively short time frame, but is also valid during daily production. I invite our clients and friends in the industry to visit our new website to learn more about the value to be derived from using the WellEz.NET field operations reporting solution.”

The new website clearly explains how the WellEz.NET web based reporting solution provides insight into field operations for multiple roles in the typical oil and gas business, from the field to the back office. The basic technical concepts on the SaaS reporting architecture are also highlighted.

About WellEz Information Management, LLC

WellEz (www.WellEz.com) is a Houston based, privately held international service company providing the web-based WellEz.NET field operations reporting and support system worldwide. The Company is staffed by experienced oil & gas professionals and a team of highly qualified software development engineers. WellEz was founded in 2000 based on a business model of providing Software-as-a-Service, and to address the limitations and cost involved with the conventional approach of buying

and installing software. The WellEz operations reporting service avoids these issues by offering a web-based solution that can be rapidly configured to each customer's specific reporting needs.
