

For Immediate Release

**WellEz Information Management announces compatibility of WellEz.NET with Windows 7**

WellEz ([www.wellez.com](http://www.wellez.com)) a Houston based, privately held international service company providing a fully supported web based field operations reporting system, announces compatibility with Microsoft Windows 7. The Company is staffed by experienced oil & gas professionals and a team of highly qualified software development engineers. WellEz was founded in 2000 based on a business model of providing Software-as-a-Service, and to address the limitations and cost involved with the conventional approach of buying and installing software. WellEz.NET avoids these issues by offering a web-based solution that can be rapidly configured to each customers' specific reporting needs.

The WellEz.NET Remote is a standalone application allowing users in the field to enter data into WellEz.NET without an internet connection. Designed for ease of use for field data entry, users easily and efficiently sync to the master system with two mouse clicks. Synchronization of field data with the WellEz master system requires no more than a dial-up internet connection.

“The WellEz Remote is an important component to the WellEz system. It allows our users all over the world to enter data without the necessity of having a constant internet connection. We are pleased to be able offer our clients full compatibility with Microsoft’s new operating system.” Said James Morley, manager of WellEz on Demand, WellEz.NET’s 24x7 client support program.
